

Email layout and visual checks

Scope: local copies of the HW3 campaign and its HW2 predecessor, viewed in Chrome. The images below show the HW3 page at a 1000 px browser window and a narrow 500 px window.

What the visual check found

- The hero image scales with the single-column layout; no content is visibly clipped at 500 px.
- The button is centered, has generous padding, and uses descriptive underlined link text.
- The banner keeps its message as selectable HTML text over an image; a dark fallback color is set.

Screenshots: wide and narrow browser previews

The narrow preview is a browser rendering check. Email clients can render CSS differently, so the live email still merits a send-to-inbox test.

Automated scan and findings

Tool: axe-core 4.10.3 in Chrome, checking WCAG 2 A/AA and WCAG 2.1 A/AA rules on local pages. The HW2 campaign is the second project page reviewed.

HW3 scan

axe-core accessibility scan: hw3

```
{
  "url": "file:///C:/Users/hashm/Documents/Codex/2026-09-17/this/work/audit-hw3.html",
  "violations": [],
  "passes": [
    "aria-deprecated-role",
    "aria-hidden-body",
    "aria-required-attr",
    "aria-roles",
    "avoid-inline-spacing",
    "bypass",
    "color-contrast",
    "document-title",
    "html-has-lang",
    "html-lang-valid",
    "image-alt",
    "link-name",
    "meta-viewport",
    "nested-interactive"
  ],
  "incomplete": [
    {
      "id": "color-contrast",
      "impact": "serious",
      "nodes": 3,
      "targets": [
        "td[background=\\\"images/workshop-banner.jpg\\\"] > p:nth-child(1)",
        "h1",
        "p:nth-child(3)"
      ]
    }
  ]
}
```

HW2 comparison scan

axe-core accessibility scan: hw2

```
{
  "url": "file:///C:/Users/hashm/Documents/Codex/2026-09-17/this/work/audit-hw2.html",
  "violations": [],
  "passes": [
    "aria-deprecated-role",
    "aria-hidden-body",
    "aria-required-attr",
    "aria-roles",
    "avoid-inline-spacing",
    "bypass",
    "color-contrast",
    "document-title",
    "html-has-lang",
    "html-lang-valid",
    "image-alt",
    "link-name",
    "meta-viewport",
    "nested-interactive"
  ],
  "incomplete": []
}
```

Results

HW3: 0 violations, 14 passed rules, 1 incomplete rule. Axe could not determine contrast for three banner text elements because their backdrop is an image.

HW2: 0 violations, 14 passed rules, 0 incomplete rules. Neither result proves full accessibility or performance in email clients.

Tool strengths and limits

axe-core - Pros: repeatable checks with precise rule names and affected elements. Cons: cannot resolve image-backed text contrast automatically, and cannot replace screen-reader or email-client testing.

Chrome visual previews - Pros: quickly expose clipping, spacing, and readability issues at different widths. Cons: appearance alone does not verify keyboard use, spoken reading order, or Outlook/Gmail rendering.

Manual follow-up: the dark fallback #102447 gives white text a calculated 15.38:1 contrast ratio. The image itself varies, so its text contrast remains a manual review item. Test with NVDA and real email clients before any real campaign send.
